

bp Energy Retail Company LLC
Information Disclosure Label
Electricity Facts

Electric power suppliers and distribution companies are required to provide customers with a disclosure label. The label enables consumers to look at the energy sources, air emissions, and information about the supplier's company in order to make a more informed choice of a power supplier.

Generation Price	Commercial Customers				
All kWhs (including usage levels of 1,000, 10,000, 20,000 and 40,000 kWh per month).	Usage Level	1,000 kWh	10,000 kWh	20,000 kWh	40,000 kWh
	Average Price per kWh	Please refer to your Sales Confirmation Agreement for contract prices. Your average electricity price may vary by time of use. See your most recent invoice for your monthly use.			
Contract	Refer to the contract terms contained in the retail electricity agreement and sales confirmation.				
Customer Service	1-877-432-4530				
	Power Source	Known Resource	System Power	Total	
Demand for this electricity product was assigned from the following sources from July to September 2024	BIOMASS		0.00%	0.00%	
	COAL		0.22%	0.22%	
	HYDRO-LARGE		5.80%	5.80%	
	HYDRO-SMALL		0.00%	0.00%	
	IMPORTED POWER		0.00%	0.00%	
	MUNICIPAL TRASH		0.33%	0.33%	
	NATURAL GAS		60.44%	60.44%	
	NUCLEAR		22.40%	22.40%	
	OIL		0.22%	0.22%	
	OTHER RENEWABLE RESOURCES		5.95%	5.95%

Air emissions for 2023 in pounds per megawatt hour. Source: ISO New England Electric Generator Air Emissions Report, Table 5-1 Average Native Generation Emission Rates	Emission Rate (lbs/MWh)				
		CO ₂	NO _x	SO ₂	
	Regional Average (NPCC)	901	0.45	0.7	
	New England	633	0.21	0.03	
	New England (%)	70%	47%	4%	
Labor Information	Generating workforce	Output(MWh)		%	
The NEPOOL labor characteristics percentage was calculated by dividing (1) the number of certificates identified as union labor on the NEPOOL-GIS report by (2) the sum of net energy load from the ISO-NE report. The values are for January 1 through December 31, 2021.	With union labor	26,903,347		23%	
	Without union labor	91,885,653		77%	
	TOTAL	118,789,000		100%	

The disclosure label applicable to all bp Energy Retail Company LLC customers is updated quarterly.

NOTES

- Electricity customers in New England are served by an integrated power grid, not particular generating units. The above information is on generating units assigned to this electricity product. To obtain information on all generating units owned by, or under contract to BP Energy Retail Company LLC, call 1-877-432-4530.
- See page 2 and your contract terms and conditions for further information on this label. You may also call BP Energy Retail Company LLC at 1-877-432-4530, or the Massachusetts Division of Energy Resources at 1-800-727-1234.

LABEL DESCRIPTION

Generation Price and Contract:

Generation Prices displayed are representative average prices for electricity at usage levels that are typical for residential customers. Contract items displayed present the length of your contract for generation service, and the price terms included in your contract. See your recent bills to determine average monthly use, and your Terms of Service for additional information.

Power Sources:

The electricity you consume comes from the New England power grid, which receives power from a variety of power plants and transmits the power throughout the region as needed to meet the requirements of all customers in New England. When you choose a power supplier, that supplier is responsible for generating and/or purchasing power that is added to the power grid in an amount equivalent to your electricity use. Known Resources include resources that are owned by, or under contract to, the supplier. System Power represents power purchased in the regional electricity market. Biomass refers to power plants that are fueled by wood or other plant matter. Hydro resources of greater than 30 megawatts in size are deemed "large hydro." All other hydro resources are deemed "small hydro." Other Renewables include fuel cells utilizing renewable fuel sources, landfill gas, and ocean thermal.

Emissions:

Emissions for each the following pollutants are presented as a percent of the regional average emission rate. Arrows represent, for each pollutant, the emission rate from a hypothetical new generation facility.

Carbon Dioxide (CO₂) is released when fossil fuels (e.g., coal, oil and natural gas) are burned.

Carbon dioxide, a greenhouse gas, is a major contributor to global warming.

Nitrogen Oxides (NO_x) form when fossil fuels and biomass are burned at high temperatures.

They contribute to acid rain and ground-level ozone (or smog), and may cause respiratory illness in children with frequent high level exposure. NO_x also contribute to oxygen deprivation of lakes and coastal waters which is destructive to fish and other animal life.

Sulfur Dioxide (SO₂) is formed when fuels containing sulfur are burned, primarily coal and oil.

Major health effects associated with SO₂ include asthma, respiratory illness and aggravation of existing cardiovascular disease. SO₂ combines with water and oxygen in the atmosphere to form acid rain, which raises the acid level of lakes and streams, and accelerates the decay of buildings and monuments.

Labor Data:

The information on this label regarding whether generators or suppliers operate under collective bargaining agreements is provided to inform you about whether the energy was produced in plants where employee wages and working conditions are mutually determined by employees and management, and protected by union contracts. The information on this label regarding the use of replacement employees during a labor dispute is provided to inform you of whether or not a generator or supplier during a strike by or lock-out of its employees has replaced them with other workers.
